Education

New York University — Aug. 2024 – May. 2026
The Courant Institute of Mathematical Sciences, M.S Computer Science | ***GPA**: 3.8/4.0* — *New York, NY*
- **Courses**: Operating Systems, Machine Learning, Programming Languages.

Pune Institute of Computer Technology — Jul. 2017 – Jul. 2021
B.E Electronics and Telecommunications | ***GPA**: 3.6/4.0* — *Pune, India*
- **Courses**: Data Structures & Algorithms, Digital Signal Processing, Computer Networks & Security

Experience

Software Engineer - Backend — Feb. 2023 – May. 2024
Avoma, Inc | *Tech Stack - Django, Python, Node.js, Celery, Redis* — *Remote*
- As a backend engineer, created various integrations for the NLP and web services using Django.
- Developed a fault-tolerant system that enabled real-time collaboration for customers using Node.js and Redis.
- Managed and integrated scheduling of asynchronous tasks between services using celery queues in Django.
- Fixed various performance aspects like memory leaks and DB bottlenecks by studying heapdumps of AI services.
- Achieved an overall 25% reduction in infrastructure costs and zero service downtimes for AI services.

Full Stack Developer — Jul. 2021 – Nov. 2022
Symbl AI | *Tech Stack - Python, Flask, Node.js* — *Pune, India*
- Worked on various NLP services like NER, Audio transcription and Text summarization using Node.js.
- Created High and Low level system designs. Optimized service API's through rate limiting and request batching.
- Developed BART NER model that identified key medical topics like disease type and patient info from sales calls.
- This NER medical analytics feature successfully detected over 30 distinct medical topics from customer data.

Summer Intern — Jul. 2020 – Nov. 2020
The Linux Foundation | *Tech Stack - Rust, Typescript, Solidity* — *Remote*
- Created a toolkit for Solang compiler using Rust to provide code analysis and debug information in VSCode.
- Wrote AST tree traversals to parse Solidity programs to find real-time code definitions and errors.
- This toolkit helps web3 blockchain developers and is currently open-sourced achieving over 4000 downloads.

Summer Intern — Jul. 2019 – May. 2020
Igalia - Chromium browser team | *Tech Stack - C++, Python, Meson build* — *Remote*
- Worked on enabling the compilation of the Wayland display driver in the Chromium browser using C++.
- Navigated the C++ codebase and wrote build scripts and header files to remotely compile browser binaries.
- My efforts led a crucial role in testing the adoption of Wayland as the next-gen display driver for Chromium.

Projects

Forecasting mid-point prices using Limit Order Books | *NYU Courant* — Nov. 2024
- Integrated classical ML models with Deep Learning approaches to predict stock prices in High Frequency trading.
- Developed a new loss function combining CNN and SVR that added penalty for stock direction movement in a trading environment. This model achieved better prediction results than DL methods like LSTM, CNN-LSTM.

Ground water monitoring tool | *Smart India Hackathon* — Feb. 2019
- Prototyped a tool to analyze the trends in groundwater usage for the Indian Water Ministry using Node.js.
- Developed dashboards with various analysis metrics like water usage charts and water tables using D3.js.
- Led a team of 6 college students throughout the project that was further selected for real-life implementation.

Skills

Languages: Python, Javascript, C++, Rust
Libraries: Node.js, React.js, Django, Redis, Numpy, Pytorch
Cloud and Databases: AWS, GCP, AmazonS3, Deepgram, Postgres, MongoDB

Awards

Won the national-level Smart India Hackathon organized by the Indian Government among 200K participants.
